**Q1** Composite Numbers in Array

5 marks

Write a program to find the number of composite numbers in an array of elements.

Sample Input:

Array={16,18,27,16,23,21,19}

Sample Output:

Number of Composite Numbers = 5

Test Cases:

1.{26,28,37,26,33,31,29}

2.{1,6,1,8,2,7,1,6,2,3,2,1,19}

3.{0,160,180,270,160,230,210,190,0}

4.{200,180,180,270,270,270,190,200}

5.{100,100,100,100,100,100,100,100}

## Your Code

```
1 import java.util.Scanner;  
2 public class Main {  
3     public static void main(String[] args) {  
4         Scanner sc = new Scanner(System.in);  
5         int n = sc.nextInt();  
6         double[] arr = new double[n];  
7         for (int i = 0; i < n; i++) {  
8             arr[i] = sc.nextDouble();  
9         }  
10        int count = 0;  
11        for (int i = 0; i < n; i++) {  
12            long num = (long) arr[i];  
13            if (num > 3 && isComposite(num)) {  
14                count++;  
15            }  
16        }  
17    }  
18 }
```

## Input

```
7  
16 18 27 16 23 21 19
```

## Output

## Q2 Skip K Numbers

5 marks

Write a program to print the numbers from M to N by skipping K numbers in between.  
Sample: M=50 N=100 K=7

## Your Code

```
1 import java.util.Scanner;
2 public class Main {
3     public static void main(String[] args) {
4         Scanner sc = new Scanner(System.in);
5         int m = sc.nextInt();
6         int n = sc.nextInt();
7         int k = sc.nextInt();
8
9         int i = m;
10        while (i <= n) {
11            System.out.print(i + " ");
12            i += (k + 1);
13        }
14    }
15 }
```

## Input

50 100 7

**Q3 Reverse Alphabetical Order**

5 marks

Write a program to arrange the letters of the word alphabetically in reverse order.  
Sample: MOSQUE -> U S Q D M E

## Your Code

```
1 import java.util.*;
2
3 public class Main {
4     public static void main(String[] args) {
5         Scanner sc = new Scanner(System.in);
6         String s = sc.nextLine().trim();
7         char[] a = s.toCharArray();
8         Arrays.sort(a);
9         for (int i = 0; i < a.length / 2; i++) {
10             char t = a[i];
11             a[i] = a[a.length - 1 - i];
12             a[a.length - 1 - i] = t;
13         }
14         for (int i = 0; i < a.length; i++) {
15             if (i > 0) System.out.print(" ");
16             System.out.print(a[i]);
17         }
18     }
19 }
```

**Q4 Palindrome Check**

5 marks

Write a program using a choice to check string/number palindrome.

## Your Code

```
1 import java.util.*;
2 public class PalindromeCheckChoice {
3     public static void main(String[] args) {
4         Scanner sc = new Scanner(System.in);
5
6         System.out.println("Choose: 1 for String Palindrome, 2 for Number Palindrome");
7         int choice = sc.nextInt();
8         sc.nextLine();
9         if (choice == 1) {
10             System.out.print("Enter string: ");
11             String s = sc.nextLine();
12             String cleaned = s.replaceAll("[\\s+]", "").toLowerCase();
13
14             int i = 0, j = cleaned.length() - 1;
15             boolean isPal = true;
16
17             while (i < j) {
18                 if (cleaned.charAt(i) != cleaned.charAt(j)) {
19                     isPal = false;
20                     break;
21                 }
22                 i++;
23                 j--;
24             }
25             System.out.println(isPal ? "Palindrome" : "Not Palindrome");
26         } else if (choice == 2) {
27             System.out.print("Enter number: ");
28             long n = sc.nextLong();
29         }
```
